SUMMARY

Backend Developer with 6 years of experience in Golang and PHP, building backend systems across enterprise financial ERP, university-scale HRIS and attendance platforms. Strong in REST API development, database performance tuning, and maintaining reliable transaction-heavy services in production environments.

EXPERIENCE

Backend Developer | PT. Zahir Internasional

Feb 2022 - Jun 2025

- Maintained dual-core backend architecture serving 4 production applications (Zahir ERP, ZahirOnline, Zahir PosX, Zahir HR) supporting 500+ clients with zero-downtime during system transition period.
- Contributed to report-generator rewrite (Node.js to Golang), translated core report logic and implemented initial Go endpoints, lowering memory footprint by 100+ MB and removing large-report out of memory failures in production.
- Resolved 25+ critical financial reporting bugs including journal inconsistencies, calculation errors, and duplicate data issues affecting profit/loss statements and balance sheets.
- Fixed 15+ transaction processing bugs addressing serial number tracking errors, inventory validation issues, and multi-currency calculation problems.
- Developed backend data-adapter endpoints to feed Jasper/HTML report templates (20+ templates) including profit/loss statements, inventory analysis, and payment tracking reports.
- Enhanced accrual handling, implemented partial allocation logic for accrued expenses/incomes and backend APIs to surface accruals in invoice flows and reports.
- Developed inventory tracking features including lot/serial number validation across multiple transaction types (transfers, adjustments, production).
- Optimized report queries and filters for financial statements including budget variance analysis, improving data accuracy and resolving calculation errors across departmental and project-level reports.

Programmer (Backend) | Universitas Islam Indonesia

May 2019 - Dec 2021

- Built microservices-based attendance system migration from legacy MS Access fingerprint system to online platform during COVID-19, serving 3000+ daily users.
- Developed database migration service to automate attendance data transfer (2000+ records daily), eliminating manual errors and ensuring data consistency.
- Built employee management system serving 3000+ daily users, standardizing workflows across multiple domains (academic, admissions, finance).
- Configured Kafka Connect connectors (registered source & sink) for cross-database synchronization, enabling real-time data propagation across microservices without manual ETL processes.
- Designed and developed REST APIs with performance optimizations including database indexing and caching strategies.
- Onboarded and mentored 8+ team members through system walkthroughs, knowledge-sharing sessions, and technical guidance.
- Collaborated with cross-functional stakeholders to ensure system requirements alignment and successful project delivery.
- Maintained technical documentation in Confluence and performed comprehensive API validation testing.

Intern Web Developer | Komuri GeekGarden

Nov 2017 - Dec 2017

- Contributed to production web applications using PHP (Laravel) and MySQL.
- Developed an internal project management application with task tracking functionality.
- Collaborated with senior developers on code reviews and learned software development best practices.

Web Programming Lab Assistant | Universitas Islam Indonesia***Mar 2017 - Jun 2017***

- Delivered web programming lectures covering HTML, CSS, JavaScript, and web fundamentals.
- Mentored 10 students through course assignments and project work.

EDUCATION**Universitas Islam Indonesia | Informatika | CGPA: 3.76*****Sep 2014 - Feb 2019*****SKILL**

- Backend Development: Golang, PHP (Laravel/Lumen), REST APIs, Microservices Architecture, Service-Oriented Architecture, Object-Oriented Programming, Software Development Life Cycle, Agile/Scrum, System Design, Legacy System Migration.
- Frontend Development: JavaScript, jQuery, HTML, CSS, Bootstrap.
- Databases & Data: PostgreSQL, MySQL, MS Access, Redis (Caching), Database Optimization, Query Performance Tuning, Indexing, Data Migration, ETL Processes, Kafka Connect (Data Synchronization).
- Tools & Technologies: Docker, Git, Linux, Confluence, Postman, Jasper Reports, AWS S3.
- Performance & Quality: Performance Tuning, Memory Optimization, Debugging, Root Cause Analysis, Code Review, Pair Programming, Manual Testing, API Testing, Production Support, Incident Resolution.
- Business Domains: ERP Software (Inventory, Finance, Manufacturing), Financial Systems (Accounting, Multi-Currency, Budget Analysis), HR Information Systems, Project Management Systems, Reporting & Analytics.
- Soft Skills: Cross-functional Collaboration, Technical Mentoring & Knowledge Transfer, Technical Documentation, Problem Solving & Analytical Thinking.
